**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 16, line 13, reference numeral "166" has been deleted.

The change has been made to remove non-limiting reference numeral.

***Allowable Subject Matter***

2. Claims 2-7, 10-14 and 16-22 are allowed.
3. The following is an examiner's statement of reasons for allowance: The prior art of record fail to teach or suggest alone or in combination, the limitations: "generating an outboard signal in response to the external signal; wherein the generating an outboard signal in response to the external signal comprises shorting across a secondary winding of the transformer" as claimed in claim 2; "generating an internal signal in response to the inboard signal; monitoring the inboard signal on a primary winding of the transformer, and squaring up the inboard signal" in a manner claimed in claims 3 and 10; "generating an internal signal in response to the inboard signal; and utilizing the internal signal in a microprocessor; receiving a second internal signal from the microprocessor; generating a second inboard signal in response to the second internal signal; transmitting the second inboard signal across the transformer to generate a second outboard signal; generating a second external signal in response to the second outboard signal; and

transmitting the second external signal to the external control system" in a manner claimed in claims 4 and 11; "the transformer comprises a primary winding and a secondary winding; the inboard signal has a lower duty cycle and a higher duty cycle; the lower duty cycle on the primary winding generates a lower voltage for the outboard signal on the secondary winding; and the higher duty cycle on the primary winding generates a higher voltage for the outboard signal on the secondary winding" as claimed in claim 16; "the outboard circuit comprises: a send circuit providing the external signal to the external control system; and a receive circuit receiving the external signal from the external control system" as claimed in claim 18; "wherein the inboard circuit comprises: a comparator providing the internal signal to the microprocessor; and an outgoing switch receiving the internal signal from the microprocessor" as claimed in claim 22. It is for these reasons in combination with all the other limitations in the independent claims 2, 3, 4, 10, 11, 16, 18 and 22, that claims 2, 3, 4-7, 10, 11-14, 16-17, 18-21 and 22 are allowable over prior art of record.

### **Conclusion**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
